

Ingeniously Informed Imaging
from the leader in advanced visualization.

Introducing TeraRecon's new suite of intelligence & interoperability tools...

iNteract+ is TeraRecon's new 'ingeniously informed' image viewer that works in combination with any of TeraRecon's medical image viewers and image sharing and storage solutions to provide unmatched intelligence, powerful interoperability and simplified integration capabilities.

iNteract+ solutions enhance the clinical end-user experience provided by PACS, VNA, EMR and other mission-critical image processing and image acquisition systems. Often, it can eliminate the need for many disparate image transport, viewing and storage systems while facilitating a smooth transition toward centralized administration of imaging resources. From the sharing time-sensitive imaging data, to expanding the clinical tools available when and where physicians are working.

iNteract+ stands alone as the only solution capable of also achieving collaborative remote access with image sharing, DICOM and non-DICOM viewing and incorporation of relevant clinical information all within one viewer.

iNteract+ Solutions...

iNteract+ iEMV

provides a complete solution for DICOM, non-DICOM and non-radiology image viewing with powerful clinical content management.

- Displays images and clinical content in context
- Supports efficient viewing of DICOM and non-DICOM
- Provides access from both inside and outside of the EMR
- Incorporates Disparate unstructured clinical content
- Extensible to diagnostic and image sharing use

iNteract+ iReview

provides a complete diagnostic radiology review environment that enhances clinical context and content awareness.

- Multi-monitor diagnostic review environment
- Capable of providing ancillary review stations for disparate PACS systems
- Compatible with voice-reporting or RIS driven workflows
- Supports multi-modality viewing of DICOM and non-DICOM images
- Incorporates Disparate unstructured clinical context
- Extensible to reference viewing and image sharing use

iNteract+ iShare

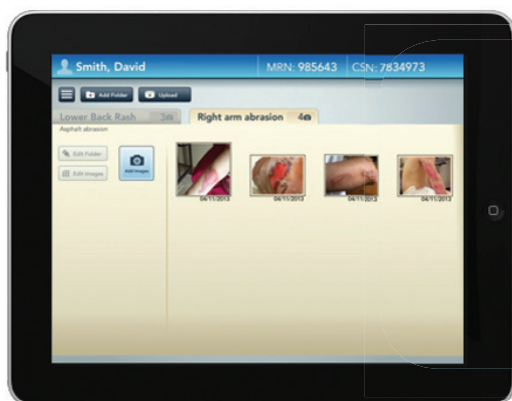

provides a complete physician sharing portal with clinical content sharing and physician referral workflow.

- Image sharing with clinical content collaboration
- Powerful iEMV reference viewer included
- High-volume and/or adhoc upload capabilities
- eReferral workflow with HIS, RIS and PACS integration
- Secure private cloud and premised-based solutions
- Incorporates disparate unstructured clinical content
- Extensible to diagnostic and EMR image enablement use

iNteract+ Mobility

provides the ability to upload secure new patient clinical content via mobile devices.

- Simple capture of mobile data
- Viewing and distribution of EMR integration via iEMV
- Work list supplied patient context
- Secured single sign on and encrypted transmission
- Transmission status with tracking and retry abilities
